

Save Time on Patient Intake with Phoenix Kiosk!

What is Phoenix Kiosk?

Phoenix Kiosk is an integrated tablet-based patient check-in solution that is designed to work with the Phoenix Ortho EHR software suite to simplify patient intake and eliminate front office bottlenecks.

How Does Phoenix Kiosk Help?

Faster Patient Intake.

Let patients check themselves in and have their health information uploaded to their Phoenix Ortho EHR chart automatically to save time.

Save Labor on Patient Intake.

Use digital forms and automatically upload them to save labor on manually processing paperwork for the front office.

Improve Data Capture.

Enforce mandatory form fills during the check-in process to ensure that you have all the data your clinic needs for the patient visit.

Increase Patient Satisfaction.

Delays in the patient care process negatively impact patient satisfaction. Removing intake bottlenecks helps you improve satisfaction.

Reduce Paperwork Errors.

Phoenix Kiosk integrates with Phoenix Ortho's EHR and PM solutions to automatically share data—eliminating manual data entry errors.

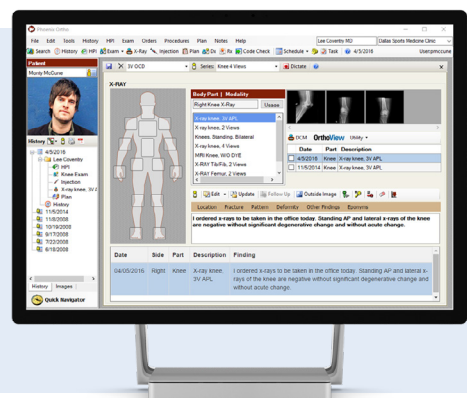

Optional Billing Integration.

If you add Phoenix Ortho's practice management solution, you can allow patients to pay copays, deductibles, and balances from the Kiosk app.

About Phoenix Ortho EHR

Phoenix Ortho's [Electronic Health Record](#) solution is built exclusively for orthopedic practices to help them save time while improving collections and coordination of care.

Save Time. Reduce Paperwork. Improve Patient Satisfaction. Use Phoenix Kiosk.
